

SOLD AND SUPPORTED APPLICATIONS FOR MOTOTRBO™

To complement the MOTOTRBO™ portfolio of digital two-way radio systems, Motorola has partnered with premium application developers across the industry to create the Motorola Sold and Supported program: a range of applications that add unique value to your MOTOTRBO radio system.

Offered for sale directly from Motorola, these are the only applications permitted to access the MOTOTRBO wireline voice system interface. This gives them better features and scalability than other applications of their type.

Motorola Sold and Supported applications undergo special in-house testing for performance and stability with each MOTOTRBO system release, so you can be assured of a high quality solution. And what's more, they are backed by Motorola's extensive support service.

From voice consoles to sophisticated resource management tools, these applications are designed to increase your efficiency, enhance your productivity and improve your safety.

SUPPORTED**

FACT SHEET

SOLD AND SUPPORTED APPLICATIONS FOR MOTOTRBO™

ENHANCED FUNCTIONALITY

At the heart of these applications is their exclusive access to Motorola’s NAI (Network Application Interface) for voice: a wireline voice and control interface that connects directly to the infrastructure of the MOTOTRBO radio network. While the control station architecture is cost-effective for applications deployed in smaller, simpler systems, the NAI interface offers better functionality and scale for larger systems.

HIGH QUALITY

Applications in the Motorola Sold and Supported program are tested in Motorola’s laboratories to ensure their performance, interoperability and stability. Motorola Product Management, Program Management and Quality Assurance staff are assigned to each application, and are responsible for ensuring that it meets customer needs and functions to Motorola-approved quality standards.

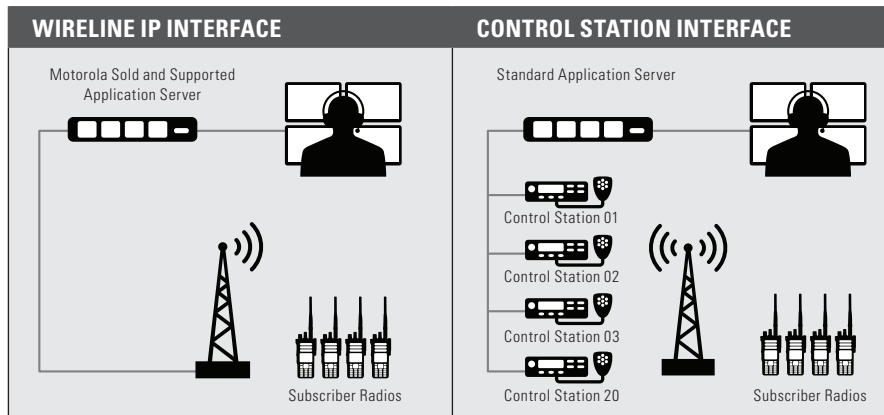

FLEXIBLE WORLD-CLASS SUPPORT

Motorola Sold and Supported applications are managed directly through Motorola’s world class support service: Motorola’s professional Helpdesk is your single point of contact. Our staff will manage queries and issues through to closure, and will coordinate and expedite amongst the different parties as necessary.

The Motorola Program Manager assigned to each application can call upon dedicated Engineering resources to troubleshoot problems. The team has access and expertise that allows them to fault-find to the lowest level.

ROADMAPPED FOR TIMELY SUCCESS

Motorola Sold and Supported application partners are also given privileged access to our development teams: they work closely with our developers, and are given access to new releases of the MOTOTRBO system code before general release.

	WIRELINE IP INTERFACE	CONTROL STATION INTERFACE
Architecture	Direct IP connection	Control Station per voice talkgroup and data channel
Scalability	Scalable to large networks, many talkgroups	Complex for larger deployments, multiple talkgroups
Voice Call Accessibility*	Console call priority supported Console takeover supported	No console call priority No console takeover
Audio Recording*	Access to all private and group calls	No access to private calls Dedicated control stations required
Inbound RSSI with Data*	Yes	No
System Types Per Console	Multiple system types	Control Station required for each system

* Not supported on all system types.
